

UniRing™ Double-Acting Piston Seals

Fewer Parts Fewer Problems

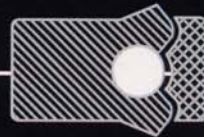

UniRing™ Piston Seals replace these multi-piece systems with one part.

“O” Ring with
Back-up Washers

“T”-Seals

Polypak/Pip Ring
Combination

All Thermoset cast seals are free of internal voids (air bubbles) which can cause sudden failures and costly down-time.

UniRing™

**A one piece urethane
dual durometer double
acting piston seal.**

- > Spin molded at 3600 RPM in our exclusive Centrifugal Molding Process
- > Results cannot be duplicated by any other molding process
- > Over ten million seals sold without a seal problem
- > Competitively priced and cost efficient single piece design
- > Low friction moly impregnated wear surface
- > Dual durometer 60D outer lamina and 57A inner lamina.

Universal Seal developed the patented “spin cast” Centrifugal Molding Process, producing seals that are more durable and functional than those made by any other process. The innovative single piece UniRing™ Piston Seal, just one of our seals produced using this process, provides longer part life and, in most cases, lower front end costs. Since 1967, Universal Seal has been creating superior, trouble free seals and continues to be a major leader in seal innovation.
